Reasons for Allowance

1. Claims 7-9 and 14-15, and 19 are allowed as the prior art does not teach or suggest the applicant's invention.

Independent claims 7 and 14 teach a calibration method. The distinguishing element of the claims is monitoring the voice coil motor velocity detection value detected by the voice coil motor velocity detection circuit while the head is positioned on the disk and, if an absolute value of a difference between the monitored voice coil motor velocity detection value and the voice coil motor velocity detection value stored in the memory is not less than a prescribed value, re-executing the calibration and performing unloading thereafter.

Independent claim 19 teaches a head loading/unloading type disk apparatus. The distinguishing elements of the claim is monitoring the voice coil motor velocity detection value detected by the voice coil motor velocity detection circuit while the head is positioned on the disk, and re-executing the calibration if an absolute value of a difference between the monitored voice coil motor velocity detection value and the voice coil motor velocity detection value stored in the memory is not less than a prescribed value.
